NEW QUESTION: 2

Which of the following is NOT a Generally Accepted System Security Principle (GASSP)?

- A. Systems owners have security responsibilities outside their organization.
- B. Computer security should be cost-effective
- C. The conception of computer viruses and worms is unethical.
- D. Computer security supports the mission of the organization

Answer: C

Explanation:

Explanation/Reference:

Explanation:

The Generally Accepted System Security Principles (GASSP) are security- oriented principles and do not specifically cover viruses or worms. However, it is not a best practice to create and distribute worms :-) GAISP is based on a solid consensus-building process that is central to the success of this approach.

Principles at all levels are developed by information security practitioners who fully understand the underlying issues of the documented practices and their application in the real world.

Then, these principles will be reviewed and vetted by skilled information security experts and authorities who will ensure that each principle is:

Accurate, complete, and consistent

Compliant with its stated objective

Technically reasonable

Well-presented, grammatically and editorially correct

Conforms to applicable standards and guideline

The principles are:

1. Computer security supports the mission of the organization
2. Computer security is an integral element of sound management
3. Computer security should be cost-effective
4. Systems owners have security responsibilities outside their own organization
5. Computer security responsibilities and accountability should be made explicit
6. Computer security requires a comprehensive and integrated approach
7. Computer security should be periodically reassessed
8. Computer security is constrained by societal factors

NOTE: The GAISP are no longer supported or active. NIST is now producing standards for the US government. However, there are still remnant of GAISP on the exam and as you can see the list is most certainly applicable today on the ethics side. The GAISP is also known as NIST SP 800-14.

NEW QUESTION: 3

DRAG DROP

A SharePoint 2010 environment contains the site collections described in the following table.

You plan to migrate the environment to SharePoint 2013. You create a SharePoint 2013 site at the URL

<http://testIntranet.contoso.com>. You restore the database backups from the 2010 environment to the 2013 environment.

You test the migration plan by migrating the Intranet.Content database to the new site.

You need to verify that the test migration succeeds.

Which Windows PowerShell cmdlets should you run? (To answer, drag the appropriate cmdlets to the correct location

or locations in the answer area. Each cmdlet may be used once, more than once, or not at all.

You may need to drag

the split bar between panes or scroll to view content.)

Answer:

Explanation:

Note:

* Test -SPContentDatabase

Use the Test-SPContentDatabase cmdlet to test a content database against a Web application

to verify all

customizations referenced within the content database are also installed in the web application.

* The Mount-SPContentDatabase cmdlet attaches an existing content database to the farm. If the database being mounted requires an upgrade, this cmdlet will cause the database to be upgraded.

Example:

ExAMPLE

```
Mount-SPContentDatabase "MyDatabase" -DatabaseServer "MyServer" -WebApplication http://sitename
```

This example mounts an existing database to the sitename web application. If upgrades are required, it triggers

database schema upgrade and then performs only build-to-build upgrade actions on existing site collections if required.
